Exercise 5.1 (Small 3/2 points)

Create an application which includes a component which uses painting operations (not Images) to draw a couple of houses. (with React you don't need to create a separate component, you App can contain the canvas).

With Java, you can use, for example `drawLine()` and `drawRect()` methods in `Graphics` or `draw(Shape s)` and `fill(Shape s)` in `Graphics2D`. With React use, e.g., `fillRect`, `strokeRect` and `path` operation in `CanvasRenderingContext2D`.

Example how exercise 5.1. solution could look like

Feel free to use any type of paint operations you like and design whatever type of houses you want (as long as you do not use image files).
